

Platform features:

The following J2EE servers are supported in Android Beta 2.0: EAServer, JBoss, JEUS, NetWeaver, WebLogic, WebSphere AS, and WebSphere CE.

APIs:

- The general and mobile APIs are extended to support the Android OS and applications.
- Appeon Resize PBL provides resizing service to automatically adjust the UI layout to fit with the mobile screen with a few lines of scripts.

AEM:

Mobile UI Resizing tool is extended to support Android devices.

Appeon Developer:

1. Standalone mobile app package tool: allows users to package the Android application as a standalone APK file.
2. Appeon Workspace customization and package tool: allows users to customize the Appeon Workspace, and package Appeon Workspace as a standalone APK file.

Offline Access:

Android applications can run as local application without needing network connection and can read/write the local SQLite and UltraLite database.
